Overview

Redmon Group designed and configured Digital Displays and audio speaker systems for 28 totem enclosures located at bus stops throughout the city of Jacksonville, Florida as well as four displays for the Rosa Parks Transit Station, Jacksonville's downtown intermodal transit station.

Approach

JTA relied on Redmon's knowledge-base and expertise to procure display equipment that would withstand the extreme weather conditions experienced in Florida at various times of the year. Redmon led a team of JTA staff members to install equipment procured by the agency. Our engineers trained staff on technical maintenance and provided documentation in order for agency staff to maintain the system with in-house resources.

Applied Skills

- Deployed Transit Display software
- Graphic design
- UI design
- Hardware specification and installation
- Project management
- Ongoing support
